

## CLAIMS

What is claimed as being new and desired to be protected by LETTERS PATENT of the United States is as follows:

1. A bug barrier apparatus for mounting on a door which moves along a door track, comprising:

a support member which includes a top end and a bottom end,  
door attachment means, attached to said support member, for  
attaching said support member to the door, and  
a set of flexible bristles connected to said support member bottom  
end.

2. The apparatus of claim 1 wherein:

the door is a sliding glass door, and  
said flexible bristles extend from the sliding glass door and contact  
a door track.

3. The apparatus of claim 2 wherein said set of flexible bristles has a  
bristle-set width which is sufficient to sweep the width of the door track.

4. The apparatus of claim 1 wherein said support member further includes:

a pair of side riser portions connected between said top end and said bottom end of said support member, and

a thru-channel defined by said support member top end, said support member bottom end, and said pair of side riser portions.

5. The apparatus of claim 4 wherein said thru-channel has an internal channel height and an internal channel width which permits said support member to be positioned around protuberances on a door edge.

6. The apparatus of claim 5 wherein said support member top end, said pair of side riser portions, and said support member bottom end define a four-sided, frame-like support member.

7. The apparatus of claim 1 wherein said door attachment means include adhesive strips.

8. The apparatus of claim 7 wherein said adhesive strips are comprised of foam, double-stick, adhesive tapes.

9. The apparatus of claim 7 wherein said adhesive strips include:  
a top adhesive strip attached to said support member top end, and  
a bottom adhesive strip attached to said support member bottom  
end.

10. The apparatus of claim 1 wherein:  
said support member is in a form of solid, planar support member,  
and  
said door attachment means are in a form of an adhesive strip  
attached to said solid, planar support member.
